

Tishk International University

A Clean Kurdistan

(Why do we have to recycle?)

Engineering faculty Interior Design Department

Project Organizer: Tishk International University
Dean of Students & Interior design department
Location of the project: Erbil, Iraq

Summary of the Project

We are producing waste every day as more than 7 billion people in the world, and we do not consume our sources such as time, food, water, electricity, etc. wisely. This may cause a global waste crisis and environmental problems. However, most people are not aware of the waste problems that they cause. This project will concentrate on the new generations of kindergarten students and share some ways to reduce waste and keep their environment clean, to grow a society that is aware of the environmental problems and how to save it for the farther future generations that explain the importance of recycling and how to keep Kurdistan clean with recycling ideas and ways to reduce our effect on the environment for kindergarten students.

Goals & Objectives of the Project

- To make people aware of waste and its harmful effects on the environment and human beings.
- To declare the negative effects of waste on the next generations.
- To exchange ideas on how to stop waste and some possible solutions for our community.
- To produce new things (trash) from the waste materials.
- Once they understand the main goals of recycling, they will implement it, and there will be a cleaner environment.

Application

Visiting different kindergartens with volunteer students from the interior design department and presenting the presentation and showing an animation that explains (Why we have to recycle?). After we will together do a small task (like a pencil cup or money box) to remind them to recycle continuously.
